OpenGov Permitting, Licensing & Code Enforcement is a modern workflow automation platform that can be rapidly deployed to streamline community development operations.

Using OpenGov to Manage Community Development Operations

- Rapidly deploy a public application portal seamlessly integrated with backend data collection & processing

- Flexibly customize internal workflows to streamline approvals across teams and departments

- Easily report on key data to improve efficiency, allocate resources & inform policy

- Manage updates to workflows, fees, security permissions and more with drag-and-drop controls

Key Features

Flexible Workflow Routing

Create custom approval workflows with conditional fees, forms, and approval steps based on application data.

Public Portal

Out-of-the-box web portal to streamline self-service online applications.

Templatized Deployment

Customizable templates and guided implementation process enable rapid deployment.

Integrated Reporting

Report on any custom data object. Save, share, and export custom reports across team members and for external stakeholders.

Inspections

Conduct mobile inspections and file attachments. Intelligent routing to optimize daily routes. Online inspection scheduling.

About OpenGov

OpenGov is the leader in providing our nation's state and local governments with modern cloud software to help power more effective and accountable government.
