

SAFEChecks has never had a check replicated and used in a check fraud scam.

About SAFEChecks

SAFEChecks began in 1993 as a division of a Southern California business bank battered by check fraud attempts that skyrocketed from \$90,000 to \$3,000,000 over three years. Greg Litster, Senior Vice President and head of the bank's Financial Services Division, hired renowned fraud consultant Frank Abagnale (*Catch Me If You Can*) to design **SAFEChecks** – America's first affordable high-security check designed for organizations of any size.

Over the next three years, check fraud attempts at the bank fell by 95%.

Mr. Litster acquired the SAFEChecks Division from the bank in 1996, and as SAFEChecks' President and CEO has continued to pioneer check fraud prevention innovations, including the **Abagnale SuperBusinessCheck** and the **Abagnale Supercheck**, America's first high security personal check. Organizations of every size throughout the United States and Canada use SAFEChecks.

Because of SAFEChecks' extensive security features and unique Secure Ordering Procedures, SAFEChecks has never had a check replicated and used in a check fraud scam. SAFEChecks also offers Positive Pay and ACH software, as well as secure check writing software that includes barcode technology. Mr. Litster provides educational seminars, fraud prevention consulting services, and expert witness services.
